(a) Weak probe, $\varepsilon_w = 0.01$
$gT_w = 32$: TDSE
$gT_w = 32$: LR
$gT_w = 64$: TDSE
$gT_w = 64$: LR
$P_{\mathrm{exc}}/\varepsilon_w^2$
Probe frequency ω/g
(b) Amplitude scaling, $\omega/g = 2.658$
$gT_w = 32$, slope 2.000
$gT_w = 64$, slope 1.999
P_{exc}
Probe amplitude ε_w
(c) Departure from linear response
$gT_w = 32$, $\varepsilon_w = 0.01$
$gT_w = 32$, $\varepsilon_w = 0.02$
$gT_w = 32$, $\varepsilon_w = 0.04$
$gT_w = 64$, $\varepsilon_w = 0.01$
$gT_w = 64$, $\varepsilon_w = 0.02$
$gT_w = 64$, $\varepsilon_w = 0.04$
$P_{\mathrm{exc}}/P_{\mathrm{LR}} - 1$
Probe frequency ω/g
