
(a) Equal peak field
(b) Equal weak-field budget
(c) Timing and polarity
(d)
(e)
(f)
P_{exc} ($\varepsilon_s = 0.6$)
P_{exc} ($\varepsilon_s = 1$)
Pulse width $g\tau$
Delay gt_d ($g\tau = 0.5$)
combined
slow: $P_{\mathrm{exc}} < 10^{-8}$
fixed $\int \varepsilon_w(t)^2 dt$
fixed $\varepsilon_w = 0.01$
slow, same peak
positive weak pulse
negative weak pulse
$\times 10^{-6}$
